Who will be the contact and be on site when the container is delivered? Please list name and contact phone #
Ground Conditions and Delivery Requirements
Ground type where container is to be placed: Gravel Dirt Grass Pavement Other
We have single axle trucks that can get stuck easily. We need hard and solid ground to delivery containers. It is the customer's responsibily to ensure the surface is adequate for the delivery to be successful.
We deliver containers on a full size truck and trailer that is approx. 60' in length. Containers are backed into place, the end is dropped and pulled out from underneath. 20' containers require 80' and 40' containers require 100' in order to be delivered. We also need approx. 12' in width and a height of at least 13.5'. We cannot delivery if there are low hanging power lines or tree branches.
We also recommend setting containers on wood blocks, timbers, treated lumber or the like to get them up off the ground to allow air flow underneath. This will help prevent condensation. Also if placing the container on new asphalt, we recommend setting the container on sheets of plywood. All these materials are to be provided by the customer and must be on site at the time of delivery.
Door position - most containers have doors on one end. When delivered, they can be loaded so the doors come off the trailer first (Doors to the rear) or last (Doors to the cab). Please specify how you want the doors loaded: Doors to the Cab: Doors to the Rear:
